Professional Summary

I'm a Senior SDET with approximately eight years of technical experience. I've developed automation frameworks for UI and API testing and integrated regression suites into CI/CD pipelines to reduce repetitive manual testing. My work has covered finance and enterprise software, including web and mobile applications.

Technical Skills

Languages: JavaScript/TypeScript (strongest current languages); Python (foundational language with extensive automation experience); C#/.NET (working proficiency); Java (earlier exposure). Additional experience: Groovy, Swift, HTML/CSS, SQL, scripting.

Test Automation: Playwright, Selenium, Katalon; UI/API, regression, manual, web and mobile testing; framework development and test planning; Node test runner, pgTAP (personal project).

CI/CD and Infrastructure: Azure DevOps, Jenkins, Docker, AWS; GitHub Actions (personal project).

Platforms: Oracle Cloud Finance; Windows, Linux, macOS, iOS, Android; Node.js and SQL databases. Personal project: React, Express, Supabase Auth, PostgreSQL.

Team Practices: Agile planning and facilitation, Jira, team leadership, communication, conflict resolution, working under pressure, attention to detail, creativity.

Experience

Personal

The SDET's Market Tracker

August 2026–Present

- Designed the features and test strategy for a React/TypeScript market tracker and directed AI-assisted development. Reviewed code changes and checked behavior through automated and manual testing.
- Implemented Google sign-in and private watchlists using Supabase Auth and PostgreSQL row-level security. Tested ownership, role isolation, and account deletion against local database and Auth services.
- Built Playwright UI tests alongside deterministic API and calculation tests. Covered failed requests, stale data, rejected asset registrations, and late responses during account and watchlist changes.
- Integrated browser, offline, and database checks into GitHub Actions. Validated CI evidence so the application's test dashboard showed failures, retry history, and missing results explicitly.
- Live application: [hosting URL pending]

Professional

SDET 3 - Finance

Church of Jesus Christ of Latter-Day Saints | March 2025 - July 2026

- Developed a TypeScript/Playwright automation framework and regression suites for Oracle Cloud Finance applications, reducing repetitive manual testing.
- Integrated automated UI tests into an Azure DevOps pipeline to make regression testing part of the CI/CD workflow.
- Tested financial workflows involving sensitive data in a high-security environment.

Professional Experience (continued)

Quality Assurance Engineer

Thetacore | September 2022 - June 2024

- Helped establish manual and automated testing processes as an early member of the startup's QA team.
- Developed a UI automation framework using Playwright with C#.NET and tested APIs and user interfaces in an Azure DevOps environment.
- Created test plans for the mobile and web versions of ThetaCore Connect. Worked closely with developers to build, test, and deploy features in an Agile team.

Quality Assurance Engineer

Software Technology Group | April 2021 - September 2022

- Automated manual test cases for the doTERRA contract using Groovy and Katalon for UI and API testing.
- Developed and maintained a Python/Selenium framework for web application testing. Also maintained Python middleware that supported API calls.

Quality Automation Engineer

Kollective Technology | October 2020 - April 2021

- Took responsibility for extending a Playwright/Node.js automation framework to test front-end and back-end software.
- Maintained Jenkins automation pipelines and tested CDN software APIs, user interfaces, and integrations with webcasting solutions.

Associate QA Automation Engineer

PrinterLogic | May 2018 - May 2020

- Designed, built, and maintained a Python/Selenium automation framework. Performed automated and manual UI and API testing for web and OS-based applications.
- Worked with Jenkins build pipelines, Docker, and AWS cloud environments to support testing.
- Led Agile sprint planning, backlog grooming, and daily stand-ups.

Software Development Intern

Busybusy | August 2015 - December 2015

- Shadowed a development team during a high school internship, learning how to build software and develop iOS applications with Swift.
- Worked with fellow interns to build a basic game with collision detection.

Education

Associate of Science in Computer Information Technology

Utah Tech University | May 2018

Certificates

Oracle University: ERP Process Essentials; EDM Cloud Implementation Professional

Google, via Coursera: App Building; App Deployment; Data Analysis
