

Ian Holdeman

(702) 283-7567 | ianrholdeman@gmail.com

Professional Summary

Senior SDET with approximately eight years of technical experience building automation frameworks and delivery tooling across finance and enterprise software. Own the design and AI-assisted development of a full-stack React/TypeScript market application, with a focus on API integration, data validation, asynchronous behavior, and cost-conscious architecture.

Technical Skills

Languages: TypeScript/JavaScript, Python, C#, SQL, Groovy, Java, Swift, HTML/CSS.

Test Automation: Playwright, Selenium, Katalon; UI/API, integration, regression, web and mobile testing; framework development; Node test runner and pgTAP (personal project).

CI/CD and Infrastructure: Azure DevOps, Jenkins, Docker, AWS; GitHub Actions and Google Cloud Run (personal project).

Platforms: Node.js, .NET, Oracle Cloud Finance; Windows, Linux, macOS, iOS, Android.

Personal project: React, Express, Supabase Auth, PostgreSQL.

Team Practices: Agile planning, issue tracking and backlog management, mentoring, technical collaboration.

Experience

Personal

The SDET's Market Tracker

August 2026 - Present

- Own product and architecture decisions for a React/TypeScript and Express market application; direct AI-assisted development, review code, and verify behavior.
- Balanced feature scope with data-access costs, replacing inaccessible fundamentals with six price/activity metrics. Loaded detailed history on demand and reused cached results to limit provider calls.
- Validated provider identities, prices, and timestamps; distinguished missing values from zero and market observation time from retrieval time. Preserved cached data with explicit stale and partial-failure states.
- Prevented late chart responses from overwriting newer selections; bounded caches, imposed request deadlines, and coalesced duplicate requests. Covered failure and recovery with deterministic and browser tests.
- Implemented Google sign-in and private watchlists with Supabase Auth and PostgreSQL row-level security; verified ownership boundaries and integrated browser, API, and database checks into GitHub Actions.
- Live application: sdet-market-tracker-855618435389.us-west1.run.app

Professional

SDET 3 - Finance

Church of Jesus Christ of Latter-Day Saints | March 2025 - July 2026

- Developed a TypeScript/Playwright automation framework and regression suites for Oracle Cloud Finance applications, reducing repetitive manual testing.
- Integrated UI regression automation into Azure DevOps pipelines to support repeatable testing within the delivery workflow.
- Tested sensitive financial workflows; mentored SDETs and helped manual testers contribute to automation.

Professional Experience (continued)

Quality Assurance Engineer

Thetacore | September 2022 - June 2024

- Developed a Playwright automation framework in C#/.NET for UI testing and tested application APIs in an Azure DevOps environment.
- Made targeted application-code changes to improve UI testability, working within the .NET codebase and collaborating with developers.
- Helped establish testing practices as an early QA team member, mentored newer engineers, and created test plans for the mobile and web versions of ThetaCore Connect.

Quality Assurance Engineer

Software Technology Group | April 2021 - September 2022

- Developed and maintained a Python/Selenium framework for web testing; maintained Python test-support middleware that simulated external APIs.
- Automated UI and API test cases for the doTERRA contract using Groovy and Katalon.

Quality Automation Engineer

Kollective Technology | October 2020 - April 2021

- Extended a Playwright/Node.js automation framework to exercise front-end and back-end behavior.
- Maintained Jenkins automation pipelines and tested CDN software APIs, user interfaces, and integrations with webcasting solutions.

Associate QA Automation Engineer

PrinterLogic | May 2018 - May 2020

- Designed, built, and maintained a Python/Selenium automation framework for web applications; performed automated and manual UI and API testing across web and OS-based software.
- Used Jenkins build pipelines, Docker, and AWS environments to support automation and testing.
- Led Agile sprint planning, backlog grooming, and daily stand-ups.

Software Development Intern

Busybusy | August 2015 - December 2015

- Learned software development and iOS application development with Swift while shadowing a development team during a high school internship.
- Collaborated with fellow interns to build a basic game with collision detection.

Education

Associate of Science in Computer Information Technology

Utah Tech University | May 2018

Certificates

Oracle University: ERP Process Essentials; EDM Cloud Implementation Professional

Google, via Coursera: AI for App Building; AI for App Deployment; AI for Data Analysis
